## **Audit Scope**

The operation was engaged in the growing of conventional potato crops at this location (Riverbend). The crop was established from a single planting in June. The crop was grown on a contiguous parcel of approximately 170 acres. The crops were at the harvest stage. There were no workers or cultural activities observed on-site. Water from the municipal system was used for mixing crop protection materials applied on the crops. Water pumped from a private on-site well and the river was distributed through separate closed pipeline systems for irrigation using an overhead system. Microbiological testing of the water and chemical toilet sanitation were outsourced. Activities observed on the surrounding areas included roadways, housing, commercial nursery, and similar conventional crop production. Other growing locations are not included in the scope.

## **Products observed during the audit**

Potatoes
